

School Screenings

“Open a window of opportunity for your child”

Speech Pathology and Educational Center is able to screen the areas of hearing, vision, and speech and language for children birth to 12 years of age.

Early Intervention is the key to helping children achieve in school. Our testing procedures are very thorough and use only the latest state-of-the-art equipment along with a comprehensive, standardized speech and language test to evaluate different skills at different ages. Our screenings are designed to identify potential problems that interfere with the child's social and academic success.

Following our screenings we provide consultation to the administration, teachers and parents regarding the results and our recommendations. Speech-Language therapy as well as parent and teacher workshops are available for the benefit of your students and school.

Contact us to schedule a screening session and/or workshops at your school.
